## 1st Grade Math in Focus

| Chapter 1: Numbers To Ten <br> Key Learning Objectives |  |  |
| :--- | :--- | :--- |
| Counting to 10 | Comparing Numbers | Number Patterns |
| In Section 1, students will learn to <br> count, read, and write numbers <br> from 0 to 10. The use of concrete <br> manipulatives and pictures of <br> objects will help to build a strong <br> foundation in the use of numbers, <br> and in the understanding of the <br> concept of zero. | In Section 2, students will learn to to <br> compare two sets of objects by <br> using one-to-one <br> correspondence, and comparing <br> numbers abstractly. Concrete <br> manipulatives and pictures help <br> students to visualize the <br> one-to-one matching process, <br> and thus, deepen their <br> understanding of the concepts | In Section 3, students will learn to <br> find 1 more or 1 less than a <br> number, exploring the <br> relationships between numbers. <br> Then, apply that knowledge to <br> complete increasing and <br> decreasing number patterns. |

| Chapter 2: Addition and Subtraction within Ten Key Learning Objectives |  |
| :---: | :---: |
| Making Number Bonds | Ways to Add and Subtract |
| In Section 1, students will learn to make number bonds for numbers to 10 , by using concrete manipulatives to identify the parts and the whole of a number. This forms an important foundation for students when students progress on to addition and subtraction strategies. | In Sections 2 and 5, students will learn various methods and strategies to write number sentences, and perform addition and subtraction fluently. The use of concrete manipulatives will help to build a strong foundation in the understanding of addition and subtraction. |
| Solving Real-World Problems | Making Fact Families |
| In Sections 3, 4, 6, and 7, students will learn to make addition and subtraction stories, and solve real-world problems. The use of pictorial representations help students construct number sentences and number bonds. They will then apply the addition and subtraction strategies learned in Sections 2 and 5, to help them solve the problems. | In Section 8, students will learn to make fact families, expanding on their knowledge of number bonds. They will also learn to determine if a number sentence is true or false, by applying the various methods and strategies they have learned in Sections 1 to 7 . |

| Chapter 3: Shapes and Patterns |  |
| :---: | :--- | :--- |
| Key Learning Objectives |  | \left\lvert\, | Exploring Flat Shapes | Exploring Solid Shapes |
| :---: | :---: |
| $\begin{array}{l}\text { In Section 1, students will learn to } \\ \text { identify, classify, and describe flat } \\ \text { shapes by their geometric } \\ \text { attributes and properties. They } \\ \text { Will also learn to divide a flat } \\ \text { shape into two and four equal } \\ \text { parts, and describe the parts. } \\ \text { Students will also learn to } \\ \text { describe the whole flat shape as } \\ \text { a sum of its parts. }\end{array}$ | $\begin{array}{l}\text { In Section 2, students will learn to } \\ \text { identify solid shapes from } \\ \text { different perspectives and } \\ \text { orientations. They will also learn } \\ \text { to classify and sort the solid } \\ \text { shapes according to how these } \\ \text { shapes can be moved. }\end{array}$ | \(\left.\begin{array}{l}In Section 3, students will learn to <br>

compose flat shapes to create a <br>
picture or a new shape, as well <br>
as compose solid shapes to <br>
create a model. They will also <br>
learn to identify the different flat <br>
shapes and solid shapes in a <br>
picture and model respectively.\end{array}\right.\right\}\)

| Chapter 4: Numbers To Twenty <br> Key Learning Objectives |  |
| :--- | :--- |
| Counting to 20 | Place Value |
| In Section 1, students will learn to read and write <br> numbers, and count on from 10 to 20. The use of <br> concrete manipulatives and pictorial <br> representations help students build a strong <br> foundation in counting on from 10. | In Section 2, students will learn to write numbers to <br> 20 in tens and ones and represent these numbers in <br> a place-value chart. Concrete manipulatives and <br> pictorial representations help students to visualize <br> the groups of 10 and deepen their understanding of <br> the place value of numbers. |
| Comparing and Ordering Numbers | Number Patterns |
| In Section 3, students will learn to compare <br> numbers up to 20 using the ">" and " $<$ " symbols. <br> They will also learn to order up to three numbers <br> with the help of a place-value chart, applying their <br> knowledge from Section 2. | In Section 4, students will learn to find 2 more or 2 <br> less than a number. Then, apply that knowledge to <br> complete increasing and decreasing number <br> patterns. The use of concrete manipulatives and <br> pictures helps students to visualize and build a <br> strong understanding of the 2 more/less <br> relationships. |

# Chapter 5: Addition and Subtraction Within Twenty <br> Key Learning Objectives 

| Ways to Add and Subtract | Solving Real-World Problems |
| :--- | :--- |
| In Sections 1 and 2, students will learn various <br> methods and strategies to write number sentences <br> and perform addition and subtraction fluently. The <br> use of concrete manipulatives will help to build a <br> strong foundation in the understanding of addition <br> and subtraction. Next, students will move on to <br> add or subtract using pictures or number bonds. <br> The use of pictorial representations and number <br> bonds help them deepen their understanding of <br> the concepts. | In Section 3, students will learn to solve real-world <br> problems by constructing number sentences. They <br> will apply the various methods and strategies of <br> addition and subtraction learned in Sections 1 and 2, <br> and use concrete manipulatives to help them <br> represent and visualize the real-world problems. |

## Chapter 6: Numbers To 40

Key Learning Objectives

| Counting to 40 | Place Value | Comparing, Ordering, and <br> Number Patterns |
| :--- | :--- | :--- |
| In Section 1, students will learn to <br> count on from 20 to 40. The use <br> of concrete manipulatives and <br> pictorial representations allow <br> students to make and visualize <br> groups of 10. Hence, paving the <br> way for students to master <br> counting numbers by tens and <br> ones. | In Section 2, students will learn to <br> write numbers to 40 in tens and <br> ones and represent these <br> numbers in a place-value chart. <br> Students will start with showing <br> numbers in tens and ones using <br> concrete manipulatives, then <br> progress on to pictorial <br> representations. They will then <br> apply that knowledge to <br> represent numbers in the abstract <br> form of a place-value chart. | In Section 3, students will learn to <br> compare and order numbers up <br> to 40, and deepen their <br> understanding of comparison by <br> finding how many more or how <br> many less. Students will also <br> continue exploring both <br> increasing and decreasing <br> number patterns. |

# Chapter 7:Calendar and Time 

Key Learning Objectives

| Using a Calendar | Telling Time to the Hour | Telling Time to the Half Hour |
| :--- | :--- | :--- |
| In Section 1, students will learn to <br> read a calendar, the days of the <br> week, months of the year, and <br> seasons of the year. They will <br> also learn how to write the date. | In Section 2, students will learn to <br> use the term "o'clock" to tell time <br> to the hour. They will also learn to <br> read and tell time to the hour on <br> an analog and digital clock. | In Section 3, students will learn to <br> use the term "half past" to tell <br> time to the half hour. They will <br> also learn to read and tell time to <br> the half hour on an analog and <br> digital clock. |

## Chapter 8: Addition And Subtraction Within 20

Key Learning Objectives

| Addition and Subtraction <br> Within 40 | Solving Real-World <br> Problems | Getting Ready for <br> Multiplication |
| :--- | :--- | :--- |
| In Sections 1 to 4, students will <br> learn various methods and <br> strategies to add and subtract <br> without and then with regrouping. <br> The use of concrete <br> manipulatives and place-value <br> charts will help students build a <br> strong foundation in the <br> regrouping process and deepen <br> their understanding of the vertical <br> form. | In Section 5, students will have <br> opportunities to solve real-world <br> problems by applying the addition <br> and subtraction strategies they <br> have learned in Sections 1 to 4. <br> The use of concrete <br> manipulatives and pictorial <br> representations help students to <br> represent and visualize the word <br> problems | In Section 6, students will explore <br> adding equal groups with <br> concrete manipulatives and <br> pictorial diagrams. Thus, building <br> the foundation for students to <br> relate repeated addition to <br> multiplication. |

## Chapter 9: Length and Weight

Key Learning Objectives

| Comparing Lengths | Measuring Lengths | Comparing and Measuring <br> Weights |
| :--- | :--- | :--- |
| In Sections 1 to 3, students will <br> learn to compare lengths of two <br> objects both directly and <br> indirectly. Concrete manipulatives <br> such as connecting cubes are <br> used to allow students to further <br> explore the ideas of taller, longer, | In Sections 4 and 5, students will <br> experience measuring lengths <br> using non-standard units such as <br> paper clips, craft sticks, and <br> more. The use of different <br> non-standard units helps <br> learn the importancents of und usiso a <br> start line when comparing <br> different units may give different <br> measurements for the same <br> object. | In Sections 6 to 8, students will <br> learn to compare the weights of <br> two objects using a balance. As <br> with length, students will then <br> progress on to using non- <br> standard units to measure <br> weight. They will then compare <br> the weight of two or more things <br> by comparing the numbers of <br> units used in weighing. |

## Chapter 10: Numbers To 120

Key Learning Objectives

| Counting to $\mathbf{1 2 0}$ | Place Value | Comparing, Ordering, and <br> Number Patterns |
| :--- | :--- | :--- |
| In Section 1, students will learn to <br> count on from 40 to 120. The use <br> of concrete manipulatives and <br> pictorial representations help <br> students to master counting in <br> tens and ones and allow them to <br> identify and visualize each <br> number. | In Section 2, students will learn to <br> show numbers to 100 in tens and <br> ones and represent these <br> numbers in a place-value chart. <br> They will also learn to <br> decompose and represent 2-digit <br> numbers in different ways both <br> concretely with manipulatives and <br> through pictorial representations. | In Section 3, students will learn to <br> compare and order numbers up <br> to 100. They will also continue <br> exploring both increasing and <br> decreasing number patterns for <br> patterns up to 10 more and 10 <br> less. |

# Chapter 11: Addition and Subtraction within 100 <br> Key Learning Objectives 

| Addition Within 100 | Subtraction Within 100 |
| :--- | :--- |
| In Sections 1 and 2, students will learn various <br> methods and strategies to add without and then <br> with regrouping. The use of concrete <br> manipulatives and place-value charts help <br> students to build a strong foundation of when <br> there is the need for regrouping, that is, when the <br> addition of ones exceeds 9, and deepen their <br> understanding of the vertical form. | In Sections 3 and 4, students will learn various <br> methods and strategies to subtract without and then <br> with regrouping. The use of concrete manipulatives <br> and place-value charts help students to build a strong <br> foundation of when there is the need for regrouping, <br> that is, when the subtraction of ones cannot be <br> carried out because of insufficient ones, and deepen <br> their understanding of the vertical form. |

| Chapter 12: Graphs <br> Key Learning Objectives |  |
| :--- | :---: |
| Simple Picture Graphs | Tally Charts and Picture Graphs |
| In Section 1, students will learn to collect, <br> organize, and show data as a picture graph. <br> Students will learn to read and understand the <br> data shown in a picture graph. | In Section 2, students will learn to collect data and <br> make a tally chart to organize the data. Then will then <br> show the data in a tally chart as a picture graph. |

| Chapter 13: Money <br> Key Learning Objectives |  |
| :--- | :--- |
| Penny, Nickel, and Dime |  |
| In Section 1, students learn to recognize, identify, <br> and name a penny, a nickel, and a dime. They <br> understand that " $\phi$ " stands for cents and practice <br> counting on to find the value of a group of <br> identical coins. Using manipulatives like coin <br> sets, students experience finding different <br> combinations of coins, less than 25申, to buy <br> items. | Qnarter Section 2, students learn to recognize, identify, and <br> name a quarter. With the coin sets, students explore <br> exchanging a quarter for a set of coins of equal value. |
| Counting Money |  |
| In Section 3, students learn to count money in <br> cents up to \$1 using the "count on" strategy. <br> They further explore using different combinations <br> of coins to show the same value with the coin <br> sets. | In Section 4, students learn to add to find the cost of <br> items and subtract to find the change. This provides |
| students with a strong foundation to progress on to |  |
| solving real-world problems involving addition and |  |
| subtraction of money. |  |
